CLINT SWINDALL™

ENGAGEMENT SPECIALIST

AV REQUIREMENTS

Audio/Visual Preference:

• Wireless clip-on Lavalier microphone

• Projector with HDMI hookup for PowerPoint presentation

• Audio connection to house or event speakers

• Access to facility's wireless Internet connection

• Large screen(s) placed to the side of the stage appropriate for audience and room dimensions

• Clint will bring his Surface Pro to present his PowerPoint presentation. He will also bring it on a memory stick for loading on to your conference computer system as a backup. He will bring his own slide changer (remote).

• Due to the proprietary nature of his presentation, the file needs to be removed from the conference computer system once the presentation is finished.

Other Considerations:

• Clint will arrive to the assigned meeting room one hour prior to his presentation for an A/V check.

• Clint moves around the stage for maximum audience engagement. For that purpose, it is preferred to have a clear front-stage area (at least six feet from the front of the stage to any table/podium, etc.)

• Clint's PowerPoint presentation does not convert well to event templates so he prefers to use his own.

• Please note that Clint's PowerPoint is not available for download or for publishing as notes or a handout. It is a supplemental resource that will not have value to someone who has not attended his session. He is happy to provide a digital outline of the presentation for attendees.

• Any audio or visual recording must be agreed upon in advance.
